## Software Developer

We are a fast-growing company in search of a high energy Software Developer. Primary Responsibilities will include building, updating, and testing software systems that interface with our various back-end systems (e.g. NetSuite) including end-user support. Responsibilities include:

- Modifying software to fix errors, adapt to new database configuration, adapt to new core software functionality, and/or improve performance
- Software programming and documentation development
- System testing and validation/quality assurance
- Interacting with users/departments regarding requirements and system deficiencies/bugs
- Coordinating with external vendors on software development/interface projects
- Analyzing current systems to recommend and plan upgrades or new software projects

Qualification:

- 2-3 years of hand-on experience with software development and support
- Microsoft .NET and SQL Server experience and plus
- Familiarity with Microsoft PowerBI or other analytics platform a plus
- Knowledge of NetSuite a plus
- Proficiency in Microsoft Office/Office 365 required
- Excellent communication skills – written and verbal
- Ability to prioritize projects and strong problem-solving skills
- Good research skills and attention to detail
